

Purpose: To populate the database with realistic historical and spatial data so that frontend charts, heatmaps, and anomalies can be verified.

Output: A seed script configured and run via npm command.

<execution_context>

@~/gemini/antigravity/gsd-core/workflows/execute-plan.md

@~/gemini/antigravity/gsd-core/templates/summary.md

</execution_context>

<success_criteria>

- The RekamMedis table contains at least 5,000 records.
- All record fields (tanggal_kunjungan, kode_icd10, nama_penyakit, kecamatan_domisili) are populated correctly.

</success_criteria>

After completion, create `.planning/phases/02-mock-ingestion-geographic-mapping-validation/02-02-SUMMARY.md`
